

STEPHEN DAVID

Full-Stack Web Developer | Melbourne, VIC

stephen.david.06@gmail.com | +61 477 274 245 | stephendavid.dev

PROFESSIONAL SUMMARY

Full-stack web developer with 10+ years of experience delivering responsive, scalable websites and applications across agency, in-house product, and freelance environments. Proven track record owning complex delivery across modern JavaScript stacks (Remix, Next.js, React, Vue), PHP-based CMSes (WordPress, Silverstripe, Shopify), and Node.js back-ends. Stronger in senior IC work than pure management, with hands-on experience mentoring junior developers, shaping technical direction, and partnering with product, design, and business stakeholders to ship production-ready solutions on deadline.

CORE SKILLS

Front-end: HTML, CSS, SCSS, TailwindCSS, Bootstrap, Vanilla JavaScript, TypeScript, React, Vue.js, Next.js, Remix.run, React Router

Back-end: PHP, Laravel, C#, .NET, Node.js, MySQL, GraphQL, Hygraph, PocketBase, Supabase, Cloudflare Workers

CMS & E-commerce: WordPress, Silverstripe, Shopify (Liquid)

DevOps & Tools: cPanel, WHM, phpMyAdmin, Docker, DDEV, GitHub Actions, Cloudflare, Google Cloud Platform, Vercel, Growthbook, Google Analytics, SEO, MS Office 365

AI & Automation: Claude, Claude Code, Anthropic API, Codex, OpenAI, Prompt Engineering, AI-Assisted Development

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer | Bear Marketing

Kelvin Grove, QLD · Jun 2026 – Present

Leading day-to-day full-stack delivery for a digital marketing agency across Next.js, Payload CMS, and Shopify projects, while mentoring another developer and taking broader ownership of technical quality, architecture, and complex implementation work.

- Mentor another developer through day-to-day technical guidance, code reviews, pairing, and clearer engineering standards that improve confidence and delivery quality
- Build and maintain client websites and applications using Next.js, delivering responsive front-end experiences alongside robust server-side and CMS-integrated functionality
- Develop and extend Payload CMS implementations, including content models, custom admin behaviour, dynamic page structures, and publishing workflows tailored to client needs
- Maintain and customise Shopify storefronts, implementing theme updates and bespoke functionality to support marketing, e-commerce, and campaign requirements
- Take ownership of more senior-level work across solution design, estimation, implementation planning, debugging, and the delivery of complex client requirements
- Manage day-to-day developer workflow through Bitbucket, including branch-based collaboration, code review, and deployment-ready handover
- Support deployment and hosting workflows using Coolify and Vultr, helping manage releases, environments, and production troubleshooting
- Lead development decisions across front-end, CMS, and back-end work, balancing delivery speed with maintainability, scalability, and long-term technical quality
- Collaborate directly with internal stakeholders to translate business, marketing, and campaign requirements into practical technical solutions delivered on deadline

Full-Stack Web Developer | Point Hacks Australia

Elsternwick, VIC · May 2023 – Jun 2026

Optimising and developing the Point Hacks and Australian Frequent Flyer websites and community platforms, while leading the adoption of AI tooling across the engineering workflow.

- Build the Point Hacks Concierge web application using Remix.run
- Rebuilt the Point Hacks website with a new design and layout using Laravel, delivering a modernised front-end alongside refreshed templating and back-end architecture
- Synchronise content to production using GraphQL integrations with Hygraph and PocketBase
- Collaborate with product, design, and business stakeholders in an agile environment to deliver features on deadline
- Evolved into an AI-driven developer by integrating LLM APIs and modern AI frameworks into day-to-day delivery, using AI as leverage to rapidly prototype features, automate repetitive engineering tasks, and shorten iteration cycles
- Identified friction in internal editorial, content, and engineering workflows and built lightweight AI-powered tools and automations to remove it, translating emerging AI capabilities into practical business outcomes
- Championed AI adoption across the team by experimenting with new tools and models, sharing patterns that worked, and helping non-engineering stakeholders understand where AI could safely improve operations
- Led the growth of new developers by owning their technical direction, running code reviews, pairing on architectural decisions, and coaching them toward independent ownership of features and AI-assisted workflows

Senior Full-Stack Developer | The Refinery Ltd

Prahran, VIC · Jul 2021 – May 2023

Led a small development team delivering full-stack websites for a digital marketing agency.

- Executed end-to-end UI/UX website development using Silverstripe CMS
- Implemented designs from the creative team into production builds using Bootstrap
- Built back-end logic and functionality using React.js, jQuery, and Grunt
- Designed database structures for efficient data storage and retrieval
- Administered WHM, cPanel, domains, and SSL certificates across client sites

Systems Administrator / Business Analyst / Full-Stack Developer | Shuk Engineering Distributors Ltd

Auckland, New Zealand · Jun 2017 – Jun 2021

Owned IT operations and produced business intelligence for a distribution company.

- Wrote SQL (MySQL) scripts to generate reports for stakeholder and managerial consumption
- Produced product purchase forecasts to support inventory and cashflow planning
- Administered relational databases including security, CRM, and product inventory systems
- Analysed and corrected data inconsistencies across core business systems
- Developed and maintained the company website and its back-end logic
- Managed core IT systems including Cin7, Microsoft 365, and Exchange

Full-Stack Developer / Office Administrator | Kiwise Digital Agency

Auckland, New Zealand · Jun 2015 – Jun 2017

Sole developer across a diverse portfolio of client websites, mobile apps, and games.

- Built and designed end-to-end WordPress websites
- Designed and developed 2D games using Cocos2D and mobile apps using React Native
- As the tech lead, established the engineering practice for incoming juniors and interns — defining build standards, leading hands-on training across the full stack, and acting as the technical anchor as the team scaled

- Developed and maintained client web applications using C# and the .NET framework, delivering server-side logic and integrations alongside front-end work

Software Engineer Intern | Accordo Group Limited

Auckland, New Zealand · Dec 2014 – Feb 2015

- Assisted in designing and developing high-value business features
- Created and executed test cases for feature development
- Designed and developed databases for efficient data management

OTHER WORKS

Freelance Full-Stack Developer | Self-employed

Australia / New Zealand · Feb 2024 – Present

Delivering scalable web solutions and responsive sites for small businesses and creatives.

- Built full-stack WordPress sites and custom WordPress themes for clients including Freddie Pitts Studio, Chingu Gel, Whitecomb Range, and musician Gelo Cruz, using PHP, JavaScript, TypeScript, Tailwind CSS, and Node.js
- Developed responsive landing pages for Safe as 3 Houses and Kinetic Effect
- Built Next.js websites including my personal portfolio (stephendavid.dev), deployed via Vercel
- Maintain and scale Shopify storefronts with ongoing development, including fansycake.com
- Customise Shopify storefronts using Liquid to extend functionality beyond theme limitations
- Currently developing mobile applications using React Router as the primary framework
- Delivered back-end features and integrations for select clients using C# and the .NET framework, extending existing enterprise systems and building bespoke business logic

EDUCATION

Bachelor of Science, Major in Computer Science

University of Auckland
